

1.Prompt for requirement-

> Create the Software Requirements for a Shop Management System based on Feature Set III.

Feature Set III:

1. Customer details

2. Product details

3. Sale

4. Discount

5. Final bill

Write the requirements in simple, clear, student-friendly language suitable for a college project.

Include:

1. Introduction

2. Objective of the System

3. Functional Requirements

4. Non-Functional Requirements

5. Hardware Requirements

6. Software Requirements

7. User Requirements

8. System Constraints

Explain each point clearly and keep the content easy to understand and ready to write in a project report.

2. Prompt for Algorithm -

> Create a simple and clear algorithm for a Shop Management System based on Feature Set III.

Feature Set III:

1. Customer details

2. Product details

3. Sale

4. Discount

5. Final bill

Write the algorithm in simple, student-friendly language suitable for a college project.

Include the following steps:

Start

Enter customer details

Enter product details

Enter quantity

Calculate sale amount

Apply discount

Calculate discount amount

Calculate final bill amount

Display the final bill

End

Use proper numbered steps, clear wording, and simple calculations. Make it ready to write in a college project report.

3. Prompt for Flowchart-

> Create a proper and simple flowchart for a Shop Management System based on Feature Set III.

Feature Set III:

1. Customer details

2. Product details

3. Sale

4. Discount

5. Final bill

Create the flowchart using standard flowchart symbols:

Oval → Start / End

Parallelogram → Input / Output

Rectangle → Process / Calculation

Diamond → Decision

Arrow → Flow direction

Use this sequence:

Start → Enter Customer Details → Enter Product Details → Enter Quantity → Calculate Sale Amount → Apply Discount → Calculate Discount Amount → Calculate Final Bill → Display Final Bill → End

Make the flowchart neat, simple, correctly connected, and suitable for a college project report. Clearly label each flowchart symbol and use arrows to show the direction of the process.

4.Prompt for ER Diagram-

> Create a proper and simple ER (Entity-Relationship) Diagram for a Shop Management System based on Feature Set III.

Feature Set III:

1. Customer details

2. Product details

3. Sale

4. Discount

5. Final bill

Use the following entities and attributes:

Customer

Customer_ID (PK)

Name

Phone

Address

Product

Product_ID (PK)

Product_Name

Price

Stock

Sale

Sale_ID (PK)

Customer_ID (FK)

Product_ID (FK)

Quantity

Sale_Date

Discount

Discount_ID (PK)

Sale_ID (FK)

Discount_Percentage

Discount_Amount

Bill

Bill_ID (PK)

Sale_ID (FK)

Total_Amount

Final_Amount

Bill_Date

Show the relationships between all entities and clearly mention Primary Key (PK), Foreign Key (FK), and cardinality (1:1, 1:M).

Use standard ER diagram notation:

Rectangle → Entity

Oval → Attribute

Diamond → Relationship

Underline → Primary Key

Clearly mark Foreign Keys as FK

Make the ER diagram neat, simple, correctly connected, and suitable for a college project report.
